INDICE

Nota introduttiva sulla consistenza della rete e sui contenuti delle tabelle…….……I

SEZIONE A - TERMOMETRIA

Abbreviazioni e segni convenzionali - Contenuto delle tabelle - Consistenza della rete termometrica al 31 Dicembre 2012……1

Elenco e caratteristiche delle stazioni termometriche……..2

Tabella I - Osservazioni termometriche giornaliere……5

Tabella II - Valori medi ed estremi della temperatura……90

SEZIONE B - PLUVIOMETRIA

Abbreviazioni e segni convenzionali - Terminologia……..109

Contenuto delle tabelle - Consistenza della rete pluviometrica al 31 Dicembre 2012.....110

Elenco e caratteristiche delle stazioni pluviometriche…….111

Tabella I - Osservazioni pluviometriche giornaliere (9-9)……..……...……..……..……...…115

Tabella II - Totali annui e mensili delle precipitazioni…….180

Tabella III - Precipitazioni di massima intensità 1-3-6-12-24…….....…187

Tabella IV - Massime precipitazioni per periodi di più giorni consecutivi……...191

Tabella V - Precipitazioni di notevole intensità e breve durata……198

NOTA INTRODUTTIVA SULLA CONSISTENZA DELLA RETE E SUI CONTENUTI DELLE TABELLE

A partire dall'anno 2015 la responsabilità della pubblicazione degli Annali Idrologici della Regione Sardegna è in capo all'Agenzia Regionale per la Protezione dell'Ambiente della Sardegna (ARPAS) (in particolare è in capo al Servizio Idrogeologico e Idrografico del Dipartimento Geologico e al Servizio Meteorologico, Agrometeorologico e Ecosistemi del Dipartimento Meteoclimatico), come conseguenza dei seguenti atti:

-L.R. 6/2006 di costituzione dell'Agenzia regionale per la protezione dell'ambiente della Sardegna - ARPAS che ai sensi dell'art.2 comma 1 lettera q così come modificato dalla L.R n.3/2008 stabilisce che ARPAS provvede "alle funzioni di centro di competenza a supporto dell'operatività del Centro Funzionale Regionale della Protezione civile di cui al Decreto Legge n 180/1998 convertito dalla legge n.277/1998 e alle PCM 27 febbraio 2004;

-DGR 34/12 del 02/09/2014 di approvazione del documento di sintesi del progetto esecutivo del CFD che prevede tra l'altro il trasferimento dell'intera rete di monitoraggio, sia fiduciaria che meccanica con osservatore, dall'ADIS all'ARPAS;

-DGR 44/24 del 07/11/2014 di approvazione definitiva del progetto esecutivo del CFD che conferma il trasferimento della rete di monitoraggio all'ARPAS individuata come soggetto gestore della rete al quale pertanto compete non solo la gestione ma anche la progettazione e realizzazione degli adeguamenti e degli sviluppi futuri della rete;

-Art.17 della L.R. 4/2015 che trasferisce all'ARPAS le funzioni del servizio idrografico relative alla rilevazione sistematica validazione e archiviazione delle grandezze idrologiche osservate nelle stazioni della rete di monitoraggio e alla pubblicazione negli Annali Idrologici delle misure rilevate e delle relative elaborazioni statistiche.

L'ente che prima era responsabile della pubblicazione degli Annali Idrologici (cioè l'Agenzia Regionale del Distretto Idrografico della Sardegna, ADIS) ha pubblicato gli Annali Idrologici parte I fino al 2011, mentre la parte II fino al 2013.

Negli Annali Idrologici a cura di ARPAS saranno inclusi sia i dati termo-pluvio idrometrici delle stazioni della rete meccanica con osservatore che venivano pubblicati nei precedenti Annali Idrologici (stazioni meccaniche), sia i dati delle stazioni termo-pluviometriche e idrometriche in telemisura della nuova rete regionale fiduciaria con finalità di Protezione Civile (RF) installate a partire dal 2005.

La rete termo-pluviometrica meccanica

Sin dal 1922 il numero delle stazioni pluviometriche utilizzate per gli Annali Idrologici è stato elevato, circa 250 per anno, con una riduzione a partire dal 2006. Le stazioni termometriche, invece, sono andate in crescendo da poche decine nel 1924 sino alle circa 160 degli ultimi anni, con un picco di circa 250 intorno al 2000.

A partire dal 2006 la consistenza della rete meccanica è stata ridotta e, di conseguenza, questo ha portato a ridurre il numero delle stazioni presenti negli Annali Idrologici. Tra il 2012 e il 2014 è stata dismessa una seconda tranche di stazioni termo-pluviometriche. La scelta delle stazioni da dismettere è quasi sempre ricaduta su stazioni installate in prossimità delle stazioni della rete fiduciaria. Nel 2012, infine, tutti i termometri a mercurio (a minima e massima) della rete meccanica, anche quelli delle stazioni in attività, sono stati sostituti da piccoli termometri elettronici a memoria locale di tecnologia Escort alimentati a batteria.

La rete termo-pluviometrica fiduciaria in tempo reale con finalità di Protezione Civile

A partire dal 2005 è stata introdotta la rete fiduciaria (RF) in telemetria di concezione moderna su tecnologia CAE, ma i dati di tale rete non sono mai stati utilizzati nella pubblicazione degli Annali Idrologici. La maggior parte dei siti delle stazioni RF sono pressochè coincidenti con quelli della rete meccanica.

La rete RF gestita da ARPAS è costituita da 117 stazioni di misura, distribuite su tutto il territorio regionale. In particolare: 92 stazioni termo-pluviometriche installate da ADIS tra il 2005 e il 2007, 2 stazioni acquisite da CONSAR (Lula e Monte Novo), 19 stazioni acquisite dall' Ente Acque della Sardegna ENAS, 3 stazioni acquisite dal Servizio Territoriale Opere Idrauliche Sassari STOISS (Coghinas a Viddalba, Rio Bade Caprile e Rio Padrongiano), e la stazione di Diga Pranu Antoni realizzata da ARPAS nell'ambito della convenzione n. 85 del 2013.

Dati delle stazioni termo-pluviometriche pubblicati nell'Annale Idrologico 2012 parte I

La Parte I del presente Annale risulta conforme alle pubblicazioni già edite dall'ADIS negli anni precedenti, sia per quanto riguarda i parametri meteo-idrologici che per il tipo di elaborazione degli stessi. Le stazioni sono state selezionate sulla base di un'approfondita analisi che ha riguardato la qualità e l'affidabilità dei dati disponibili, dopo una precisa validazione dei dati, e sulla base dell'esistenza di una quantità di osservazioni di almeno 6 mesi. Per la rete meccanica sono stati pubblicati i dati pluviometrici relativi a 163 stazioni e i dati termometrici relativi a 134 stazioni (poichè il 2012 è stato l'anno della progressiva dismissione del termometro a minima e massima, per la maggior parte delle stazioni la serie termometrica è incompleta), mentre per la rete fiduciaria (RF) sono stati pubblicati i dati pluviometrici relativi a 94 stazioni e i dati termometrici relativi a 36 stazioni. In particolare, relativamente alla rete RF, per la pluviometria non sono stati pubblicati i dati delle 19 stazioni acquisite da ENAS (non validati) e quelli relativi alle restanti stazioni attivate successivamente all'anno 2012, mentre per la termometria sono stati pubblicati i soli dati validati.

Nella seguente Tabella è riportato l'elenco delle 163 stazioni meccaniche pluviometriche e delle 94 stazioni RF pluviometriche (le termometriche sono un sottoinsieme di questo) da cui derivano i dati pubblicati nel presente Annale Idrologico, per un totale di 257 stazioni pluviometriche e 170 stazioni termometriche.

Mentre per le stazioni RF i dati sono stati acquisiti con intervallo temporale al minuto per le piogge e alla mezz'ora per le temperature, per quelle meccaniche i dati sono stati acquisiti con intervallo temporale giornaliero. Per questo motivo, nella Tabella III 'Precipitazioni di massima intensità 1-3-6-12-24 ore' e nella Tabella V 'Precipitazioni di notevole intensità e breve durata' della Sezione B 'Pluviometria' sono riportati soltanto i dati relativi alle stazioni in rete RF, mentre quelli relativi alle stazioni meccaniche saranno oggetto di una pubblicazione successiva. Inoltre nella Tabella IV 'Massime precipitazioni per periodi di più giorni consecutivi', mentre per le stazioni RF le massime precipitazioni per 1, 2, 3, 4 e 5 giorni consecutivi sono state calcolate utilizzando una finestra temporale di 1, 2, 3, 4 e 5 giorni mobile al minuto su tutto l'arco dell'anno, per quanto riguarda le stazioni meccaniche la finestra mobile è stata traslata, con passo non al

minuto ma a scala giornaliera. Per tanto si genereranno situazioni, apparentemente incongruenti nei casi in cui i dati sono stati acquisiti sia da stazioni meccaniche sia da stazioni RF in siti molto prossimi.

Osservazioni sul calcolo delle temperature medie mensili

Storicamente nella Tabella I della Sezione A della Parte Prima degli Annali Idrologici (Osservazioni termometriche giornaliere) venivano riportate anche le temperature medie mensili normali calcolate per un periodo storico di riferimento.

Nel presente Annale, per il calcolo delle temperature medie mensili delle stazioni della rete meccanica sono stati utilizzati i dati osservati nel periodo 1995-2011, tranne per le stazioni di Esterzili, Mogorella, Montevecchio, Monti Mannu, Pranu Antoni, San Giovanni Suergiu, Sig.Marta e Siliqua per cui non si aveva a disposizione un intervallo temporale di dati superiore a 15 anni. Mentre per la stazione di Cossatzu è stata utilizzata la media mensile ottenuta con i dati osservati tra il 1971 e il 2000.

Per quanto riguarda le stazioni RF, poiché sono state installate recentemente, le temperature medie, anche se non rappresentative della climatologia, sono calcolate utilizzando i dati osservati dall'anno di installazione (2005-2007) al 2011.

Inoltre, mentre le temperature medie mensili delle stazioni meccaniche sono state calcolate come storicamente fatto negli Annali Idrologici precedenti, mediando la temperatura media mensile massima e la temperatura media mensile minima, le temperature medie mensili osservate dalle stazioni RF sono state calcolate utilizzando tutte le osservazioni alla mezz'ora.

Nelle seguenti Tabelle sono riportate sia le temperature medie mensili per le stazioni meccaniche, dal 1995 al 2011, (calcolate sui dati rilevati ad una quota compresa tra 1,5 e 1,6 m dal suolo) sia quelle relative alle stazioni RF, dall'anno di installazione (2005-2007) al 2011 (calcolate sui dati rilevati ad una quota compresa tra 1,5 e 1,9 m dal suolo).

Stazioni meccaniche - Temperature medie mensili dal 1995 al 2011 [°C]

Sezione A - TERMOMETRIA

Abbreviazioni e segni convenzionali

Termometro a massima e minima ..... Tm

Termometro registratore..... Tr

Dato incerto..... ?

Dato mancante..... >>

Dato interpolato ..... []

Sono stampati in **grassetto** ed in *corsivo* rispettivamente i valori massimi e i valori minimi

CONTENUTO DELLA TABELLA

I dati sono trasmessi da stazioni termopluviometriche o da osservatori dipendenti direttamente o controllati dall'Ufficio. Ogni stazione è fornita di un termometro a massima e a minima, che viene osservato ogni giorno alle 9 antimeridiane. I valori massimo e minimo vengono assegnati al giorno stesso dell'osservazione.

Le stazioni sono ordinate nelle tabelle secondo la rispettiva posizione idrografica.

Le tabelle sono precedute dall'elenco e caratteristiche delle stazioni termometriche che hanno funzionato nell'anno.

TABELLA I. - Sono riportati, per le stazioni che hanno regolarnente funzionato nell'anno, i valori massimi e minimi rilevati giornalmente, e le rispettive medie mensili, unitamente alla temperatura media del mese e dell'anno cui si riferiscono le osservazioni e le corrispondenti medie del periodo.

TABELLA II. - Per le stazioni della tabella I sono riportate:

a) le medie mensili ed annue delle massime e delle minime temperature osservate giornalmente e le medie mensili ed annule delle temperature diurne. Come <<temperatura diurna>> è assunto il valore della semisomma delle temperature massime e minime osservate in uno stesso giorno;

b) le temperature estreme (massima e minima) osservate in ogni mese dell'anno, ed il giorno nel quale sono state osservate.

Tutte le temperature riportate sono espresse in gradi centigradi e corrispondono alle letture effettivamente eseguite, non essendosi effettuata la riduzione al livello del mare.

CONSISTENZA DELLA RETE TERMOMETRICA AL 31 DICEMBRE 2012

Sezione B - PLUVIOMETRIA

Abbreviazioni e segni convenzionali

Pluviometri comune	P
Pluvionivometro	Pn
Pluviometro registratore	Pr
Precipitazione nevosa (registrata al pluviometro)	*
Precipitazione nulla	-
Dato incerto	?
Dato mancante	>>
Dato interpolato	[]

Sono stampati in **grassetto** ed in *corsivo* rispettivamente i valori massimi e i valori minimi

TERMINOLOGIA

1. - Altezza di precipitazione (mm): quoziente del volume di acqua raccolta nel pluviometro (compresa, eventualmente, la neve sciolta) per l'area della superficie orizzontale dell\'imbuto raccoglitore.

2. - Giorno piovoso: giorno in cui è stata misurata un'altezza di precipitazione uguale o superiore ad un millimetro.

3. - Intensità media di precipitazione, in un dato intervallo di tempo: quoziente dell'altezza di precipitazione nell'intervallo per la durata di questo.

CONTENUTO DELLA TABELLA

Le tabelle sono precedute dall'elenco e caratteristiche delle stazioni di osservazione che hanno fuzionato nell'anno.

I valori delle precipitazioni riportati sono espressi in millimetri di acqua e comprendono pioggia e neve fusa.

TABELLA I. - Per ogni stazione riporta la quantità di pioggia caduta giornalmente ed i totali mensili ed annui della precipitazione e del numero di giorni piovosi. Per le stazioni dotate di apparecchiatura a lettura diretta (pluviometri e pluvionivometri) le osservazioni vengono eseguite ogni giorno, generalmente alle ore 9 ed il risultato viene attribuito il giorno stesso della misura: il valore segnato rappresenta quindi la quantità di precipitazione caduta nelle 24 ore che hanno preceduto la misura.

Per le stazioni dotate di pluviografo, si riporta, per ogni giorno, la quantità di pioggia che dal diagramma risulta caduta nelle 24 ore comprese fra le 9 ore del giorno precedente e le 9 ore del giorno di cui si tratta.

Con il carattere grassetto è stampato il massimo quantitativo giornaliero misurato per ogni mese.

TABELLA II. - Per le stesse stazioni di cui alla tabella I, riporta i totali mensili ed annui delle quantità di precipitazione. Per ciascuna stazione è riportato in grassetto il più elevato dei valori mensili ed in corsivo il più basso

TABELLA III. - Per le stazioni dotate di pluviografo, riporta i dati relativi ai valori più elevati delle precipitazioni registrate nell'anno, per 1, 3, 6, 12, 24 ore consecutive appartenenti o no allo stesso giorno. Sono considerate le precipitazioni iniziate dopo le ore 0 del primo gennaio e quelle eventualmente terminate dopo le 24 del 31 dicembre.

TABELLA IV. - Riporta i massimi valori delle precipitazioni, di tutte le stazioni del Compartimento verificatesi per 1, 2, 3, 4, e 5 giorni consecutivi, appartenenti o no allo stesso mese. Sono considerati solamente i periodi il cui inizio cade entro l'anno anche se eventualmente sono terminati nell'anno successivo.

Per le durate da 2 a 5 giorni le altezze possono talvolta essere uguali a quelle di durata inferiore; il periodo indicato è sempre quello nel quale si è verificata l'altezza considerata. E ciò per evitare che il massimo di 2 giorni possa risultare inferiore a quello di un giorno e così via.

TABELLA V. - Riporta il valore, la durata e la data delle precipitazioni di maggiore intensità e di breve durata registrate ai pluviografi.
